Abstract

There has been a remarkable advancement in communications via the Internet over the past few years. Millions of people worldwide, with broad interests and knowledge, access the World Wide Web on a regular basis. This has led to a striking amount of information being placed and read in multiple web pages. Unfortunately, this information is unregulated and it is often inaccurate.¹

There is a need to provide quality medical electronic publications that follow set standards for paper publications.^{2,3,4} The objective of this Internet Journal is to fill this need within the areas of Asthma, Allergy and Immunology.

To assure so, the Editorial Board has been composed of a remarkable group of experts in the field, and all publications

are peer reviewed. In addition, all articles are published according to the Uniform requirements for manuscripts submitted to biomedical journals,⁵ set by the International Committee of Medical Journal Editors.
